Use the car in the management, regging and setting of this 2A sound investment in silent performance and a6 air cooled efficiency with chiller with comfort comfort comfort comfort comfort. Trust the latest 30GXN cooler, R air-cooled to offer the same reliability along with the industry's quiet operation that reduces the need for a costly noise mitigation. The reliability of 30GXN starts with the semi-remetic screw compressors of the carrier. Simplicity-there are only three mobile parts-is the key to the reputation without problems of compressors. The 30GXN, R is also the only air-cooled screw cooler designed from scratch for environmentally friendly HFC-134A refrigerant. The silent and spared performance is standard with Carrier's 30GXN, R Chillers. The owners who compare the sound levels of 30GXN, with the competition feel an obvious difference. With radiated audio power up to 12 dB (a) below, the 30GXN, R is twice as quiet. The amazingly quiet operation of 30GXN is the result of several factors. a6 e Screw compressors with precision of carriers are inherently quieter. a6 e Engineers using mathematical models have explored scores of possible fan designs to find the optimal combination of blade shape, low turbulence air flow and high efficiency for 30GXN, r. a6 e As fans move the air more efficiently, there are less. Less fan, less noise. a6 e Optional sound loops reduce radiated sound even more. Quiet operation means tenants and satisfied neighbors, but can also save thousands of dollars in construction costs. In densely populated areas or in jurisdictions with strict noise standards, some owners/buildings were forced to erect masonry walls from \$ 30,000 around competitive refrigerators to conform to the codes and prevent the neighbor The intelligent design of 30gxN, R - Remplifying, before the beginning. And optional sound caps make this silent refrigerator even more silent to a small part of the cost of building a barrier. The installation time and costs are reduced to a minimum because the imprint of 30gxN, of R is significantly small of the competitive refrigerators. For example, a 250-ton 30gxN, r 11 shorter than a comparable refrigerator evaluated at 230 tons. Cie translates into a savings on the construction costs of about \$ 3,000 according to the data on published construction costs. For a 30 tons of 30 tons, r, the savings would be approximately \$ 2,000 compared to a competitive refrigerator. Quiet operation to save money. The space to save money puts you money in your pocket. Chiller Air with competitive air cooling 36" - 1 1/2" Carrier 30gxN, R 25" - 3 1/4" thin improvements in the lassa design create dramatic reductions in the sound of the fan by increasing the efficiency of the air. The silent advantage of 30gxN is easily seen ... and listened to. A difference of 12 dB (a) on some models eliminates the need to build expensive sound barriers. 30GXN, r up to 50 % small of many of the air cooled refrigerators that replace. The microprocessor of comfortlink incorporated in every 30gxN, is a dream of an operator. It is powerful, but you don't need a doctorate, or even a manual, interpret that it is telling you. In a simple English (or French, Spanish or Portuguese), the diagnostic comfortlink tool and diagnostic tool of Hand-hold-hold-hold-hold-holds provides detailed levels of information on practically every aspect of the functioning of the cooler.
